

CIANTIS Beauty Space Check-In System Master Plan

This document defines the Beauty Space Check-In System for the CIANTIS app. The purpose is to help the user remember routine feminine self-care tasks, personal grooming habits, beauty maintenance, hygiene activities, and long-term care tasks that are easy to forget.

Universal Check-In Button

A small universal Check-In icon appears near the search bar throughout the app. The icon opens a lightweight popup screen. Users can complete check-ins without navigating away from their current screen. Completed items glow around the border when marked complete.

Check-In Categories

Beauty & Grooming Hair Care Facial Care Body Care Nails Hygiene Self-Care Health Reminders
Seasonal Tasks Custom User Tasks

Daily Check-Ins

Wash face Morning skincare Night skincare Brush teeth Floss Mouthwash Deodorant Hydration
check Hair protection routine Take vitamins Lip care Body lotion Shower/Bath Hair/scalp inspection

products Discard expired cosmetics Replace toothbrush head Skin progress photos Budget review
for beauty spending

Yearly Check-Ins

Annual beauty goals review Replace old tools Update routines Hair growth comparison Skin
comparison photos Beauty budget planning New year self-care reset

Completion System

Each task uses a circular indicator. Tap once = complete. Border glows when completed. History is saved. Completion dates are stored. Streak tracking can be added later.

Reminder System

If a task is not completed, reminders are generated automatically. Missed tasks appear in the app reminder center. Optional push notifications. Snooze options. Reminder frequency customizable in settings.

Future Settings

Choose which tasks appear. Choose daily/weekly/monthly/yearly frequency. Custom reminder times. Create custom tasks. Enable/disable categories. Adjust check-in days. Change icon styles. Export completion history.

Future AI Features

AI notices forgotten habits. AI suggests routines. AI identifies declining consistency. AI generates encouragement messages. AI creates beauty maintenance schedules.

Important Design Notes

The system should feel elegant, feminine, lightweight, and quick. The user should be able to complete all check-ins in under 30 seconds. Daily tasks appear every day. Weekly tasks appear only on selected weekly days. Monthly tasks appear only when due. Yearly tasks appear once per year. The check-in system will eventually be available across all CIANTIS spaces, not just Beauty Space.
