

Ciantis App Build Planner

Purpose of This Planner

This planner keeps the Ciantis app build in the correct order so you do not keep rebuilding the same code over and over.

The goal is simple:

Build the foundation first. Build each space second. Connect features third. Polish, settings, onboarding, and tutorials last.

1. Master Build Rule

The correct order is:

1. **App foundation**
2. **Navigation system**
3. **Spaces foundation**
4. **Core spaces, one by one**
5. **Shared tools used across spaces**
6. **Data storage and export system**
7. **Security and locked areas**
8. **Search, scan, upload, and AI sorting tools**
9. **Space settings**
10. **Global settings tab**
11. **Personalization and wallpapers**
12. **Help center**
13. **First-use tutorial / walkthrough**
14. **Final testing and cleanup**

Important rule:

Do **not** build the Settings tab too early.

Settings should come after most features exist because settings control real features. If the features are not built yet, the settings page will keep needing edits.

2. Project Build Phases

Phase 1 — App Foundation

Build this before anything else.

Goal

Create the base structure of the app so every future feature has somewhere clean to live.

Includes

- App theme system
- Main app shell
- App routing/navigation
- Main dashboard layout
- Bottom navigation
- Side menu if needed
- Global spacing, colors, fonts, cards, buttons
- Basic placeholder screens
- Folder/file structure
- Reusable widgets/components

Do first because:

Everything else depends on this.

Leave space for later:

- Tutorial overlays
- Sound effects
- Animations
- Wallpaper picker
- Advanced personalization
- Settings controls

Status

- [] Not started
 - [] In progress
 - [] Done
-

Phase 2 — Navigation System

Goal

Make sure every main area of the app can be reached without confusion.

Includes

- Home dashboard
- Spaces page
- App drawer
- Bottom taskbar/navigation
- Back navigation
- Space detail navigation
- Placeholder pages for every future major section

Build before:

Individual spaces.

Do not add yet:

- Final settings
- Final tutorial
- Deep customization

Status

- [] Not started
- [] In progress
- [] Done

Phase 3 — Spaces Foundation

Goal

Create the system that all spaces use.

A “space” is a main life category inside Ciantis, such as Health, School, Work, Spiritual, Home, Money, Beauty, Kids, Documents, etc.

Includes

- Space model/data structure
- Space cards
- Space icons

- Space names
- Space descriptions
- Space dashboard layout
- Space sorting/order system
- Ability to add a future space later
- Ability to hide/remove a space later
- Placeholder for each space's settings
- Placeholder for documents/files connected to that space

Important rule

Build the **spaces foundation first**, before building each space individually.

Leave space for later:

- Reordering spaces
- Removing/hiding spaces
- Custom icons
- Custom wallpapers per space
- Custom privacy locks per space
- Space-specific notification settings

Status

- [] Not started
- [] In progress
- [] Done

3. Suggested Space Build Order

Build spaces in order of importance and usefulness. Do not jump around unless something blocks progress.

Space 1 — Documents / Important Files Space

Why this should be early

You specifically want scanning, uploading, organizing, and storing documents. This is one of the strongest features of the app.

Includes

- Upload document button
- Scan document button placeholder
- Document categories
- AI document type detection placeholder

- Confirmation before saving
- Secure file cabinet layout
- Document details page
- Search documents
- Filter by document type
- Sort by date/category

Example categories

- Receipts
- Warranty papers
- Court/legal papers
- School documents
- Medical records
- Bills
- Tax documents
- Business documents
- Kids documents
- Identity documents
- Other

Leave space for later

- Real OCR scanning
- AI document classification
- PDF generation
- Biometric lock
- Cloud backup
- Export documents

Status

- [] Not started
- [] In progress
- [] Done

Space 2 — Health Space

Why this should come early

Health is a core daily-use space and can connect to food, workouts, period tracking, medications, appointments, and goals.

Includes

- Health dashboard
- Food log placeholder

- Water tracker placeholder
- Weight tracker placeholder
- Workout menu placeholder
- Period/cycle tracker placeholder
- Medication tracker placeholder
- Appointments placeholder
- Health notes

Leave space for later

- Food photo AI detection
- Calorie calculation
- Plate planner
- Workout videos
- Charts
- Health reminders
- Wearable integrations

Status

- [] Not started
- [] In progress
- [] Done

Space 3 — Money / Business Space

Includes

- Budget dashboard
- Bills tracker
- Income tracker
- Expense tracker
- Business ideas
- Goals
- Debt tracker
- Savings tracker
- Receipts connection to Documents space

Leave space for later

- Export reports
- Charts
- Bank-like visuals
- Invoice tools
- Business planner
- Tax document connection

Status

- ☐ Not started
 - ☐ In progress
 - ☐ Done
-

Space 4 — School / Learning Space

Includes

- School dashboard
- Class list
- Assignments
- Study planner
- Notes
- Due dates
- Kids learning area placeholder
- Course materials placeholder

Leave space for later

- AI tutor tools
- Printable worksheets
- Flashcards
- Study timers
- Grade tracker

Status

- ☐ Not started
 - ☐ In progress
 - ☐ Done
-

Space 5 — Work / Career Space

Includes

- Work dashboard
- Job applications
- Resume storage
- Certifications/licenses
- Schedule notes
- Career goals
- Training/class planning

Leave space for later

- Resume builder
- Job tracker
- Interview prep
- License renewal reminders
- Business class/course builder

Status

- ☐ Not started
 - ☐ In progress
 - ☐ Done
-

Space 6 — Spiritual Space

Includes

- Spiritual dashboard
- Prayer journal
- Bible study notes
- Devotionals
- Deliverance/spiritual warfare notes
- Book/project storage

Leave space for later

- Daily devotional notifications
- Scripture search
- Spiritual book library
- Audio prayers

Status

- ☐ Not started
 - ☐ In progress
 - ☐ Done
-

Space 7 — Home / Life Management Space

Includes

- Home dashboard
- Chores
- Cleaning schedule

- Meal planning placeholder
- Household inventory
- Repairs/maintenance
- Family notes

Leave space for later

- Smart home integrations
- Grocery list automation
- Home document connections

Status

- ☐ Not started
 - ☐ In progress
 - ☐ Done
-

Space 8 — Beauty / Salon Space

Includes

- Beauty dashboard
- Client/model calls
- Service menu
- Class planning
- Product inventory
- Hair/nail inspiration
- Consultation notes

Leave space for later

- Booking system
- Payment deposits
- Client forms
- Before/after gallery
- Course platform connection

Status

- ☐ Not started
 - ☐ In progress
 - ☐ Done
-

Space 9 — Kids / Family Space

Includes

- Kids dashboard
- Learning schedule
- Reading tracker
- Math tracker
- Behavior/following instructions tracker
- Activities
- School documents connection

Leave space for later

- Printable worksheets
- Reward charts
- Parent reports
- AI lesson planning

Status

- [] Not started
 - [] In progress
 - [] Done
-

Space 10 — Library / Books Space

Includes

- Bookshelf layout
- EPUB/PDF placeholder
- Categories
- Reading list
- Notes
- Favorites

Leave space for later

- EPUB reader
- Highlights
- Book import
- Audiobook support

Status

- [] Not started
- [] In progress

- ☐ Done
-

4. Shared Tools to Build After Main Spaces Exist

These features touch multiple spaces, so build them after the spaces are created.

Shared Tool 1 — Upload System

Used by

- Documents
- Health
- School
- Work
- Spiritual
- Beauty
- Kids
- Library

Includes

- Upload file
- Upload image
- Upload video placeholder
- Choose space/category
- Recent uploads
- File preview placeholder

Status

- ☐ Not started
 - ☐ In progress
 - ☐ Done
-

Shared Tool 2 — Search System

Includes

- Search all app data
- Search by space
- Filter by type
- Filter by date
- Search documents
- Search notes

Status

- ☐ Not started
 - ☐ In progress
 - ☐ Done
-

Shared Tool 3 — Export System

Includes

- Export all data
- Export by topic/space
- Export by date range
- Export documents only
- Export notes only
- Organized sections in export file

Important

This should be built after data exists so the export knows what it is exporting.

Status

- ☐ Not started
 - ☐ In progress
 - ☐ Done
-

Shared Tool 4 — Security System

Includes

- App lock placeholder
- PIN placeholder
- Face/fingerprint placeholder
- Locked spaces
- Locked documents
- Failed attempt flow
- Security questions placeholder

Important

Security should be planned early but fully connected later.

Status

- [] Not started
 - [] In progress
 - [] Done
-

5. Settings Should Come Near the End

Why settings go later

Settings control features. If the features are not built yet, the settings page becomes fake or has to be rewritten repeatedly.

Build settings after:

- Spaces exist
- Main features exist
- Upload/export/security systems exist
- Personalization options are clear

Settings sections to include later

Account & Profile

- Name
- Profile picture/avatar
- Email
- App nickname
- Personal preferences

Appearance

- Theme
- Accent color
- Font size
- Wallpaper
- Device layout
- Light/dark mode

Spaces

- Reorder spaces
- Hide spaces
- Add custom space
- Rename custom spaces

- Space icons
- Space wallpapers
- Space privacy

Security

- PIN
- Biometric lock
- Security questions
- Locked folders
- Failed login options

Documents

- Default scan category
- Confirm before saving
- AI sorting on/off
- Document export options

Notifications

- Reminders
- Health reminders
- School reminders
- Bills reminders
- Spiritual reminders

Data & Export

- Export all data
- Export by space
- Export by date range
- Backup options
- Delete/reset options

Help & Support

- How to use the app
- App guide
- FAQ
- Contact/support placeholder

Status

- [] Not started
- [] In progress
- [] Done

6. First-Use Tutorial Goes Last Last

Why tutorial goes last

The tutorial teaches users how to use finished features. If the app is not finished, the tutorial will keep changing.

Tutorial should include:

- Welcome screen
- What Ciantis is
- How spaces work
- How to upload/scan documents
- How to use locked documents
- How to export data
- How to customize the app
- How to use search
- Final “enter app” screen

Add after:

- Main screens are stable
- Navigation is stable
- Settings are stable
- Final design is chosen

Status

- [] Not started
- [] In progress
- [] Done

7. Parking Lot for Future Ideas

Use this section when you get a new idea but it does not belong in the current phase.

New ideas to save for later

- []
- []
- []
- []
- []

- []
- []
- []
- []
- []

8. Current Build Focus

Right now, we are working on:

Spaces Foundation

Do not jump to:

- Full settings tab
- Full tutorial
- Fancy animations
- Final onboarding
- Final wallpapers
- Final AI features

Current allowed work:

- Space data model
- Space dashboard
- Space cards
- Add/hide/reorder space placeholders
- One space detail layout
- Shared reusable components

9. The “Should We Build This Now?” Test

Before adding any feature, ask:

1. Does this belong to the app foundation?
2. Does this belong to the current space we are building?
3. Does another feature need to exist first?
4. Will this force us to rewrite settings later?
5. Is this a polish feature that should wait?
6. Is this a tutorial/onboarding feature that should go last?

If the answer is “this depends on unfinished features,” put it in the parking lot.

10. Simple Daily Build Method

Each build session should follow this order:

1. Pick one phase.
2. Pick one feature inside that phase.
3. Code only that feature.
4. Test that it opens and works.
5. Mark it done.
6. Move to the next feature.

Do not do this:

- Jump from documents to settings to tutorial to wallpapers in one session.
- Build fake settings for features that do not exist yet.
- Keep redesigning the same screen before the structure works.
- Add advanced AI before upload/storage works.

11. Next Best Coding Step

The next best coding step should be:

Build the Spaces Foundation properly.

This means coding:

- A list of spaces
- A space card component
- A spaces screen
- A space detail screen
- A placeholder settings area for each space
- A placeholder for future reorder/hide/add space tools

After that, build the **Documents / Important Files Space** first.

12. Final Master Order Checklist

- [] App foundation
- [] Navigation system
- [] Spaces foundation
- [] Documents / Important Files Space

- ☐ Health Space
- ☐ Money / Business Space
- ☐ School / Learning Space
- ☐ Work / Career Space
- ☐ Spiritual Space
- ☐ Home / Life Management Space
- ☐ Beauty / Salon Space
- ☐ Kids / Family Space
- ☐ Library / Books Space
- ☐ Upload system
- ☐ Search system
- ☐ Export system
- ☐ Security system
- ☐ Space settings
- ☐ Global settings tab
- ☐ Personalization/wallpapers
- ☐ Help center
- ☐ First-use tutorial
- ☐ Final testing
